

Instagram Money Method: From 0 To Hero

Hello everyone and welcome to my new long-awaited eBook from the 0 To Hero Series. This amazing Instagram themed eBook will go over a wide range of topics to make you a successful influencer in no time. How? – you may ask, but trust me on this one, it's a solid tactic proven to work by me over 10 times while I gathered over 300k followers on Instagram. You sit there, do nothing, and your Instagram page keeps blowing up. Yes, some time and effort is a must in the first stages, but after you set everything up it's a done deal.

Now, these are the 20 steps included in this thorough eBook, but it's all that you need to know, so hold onto your phones and PCs and let's get into it.

1. Understand the Mechanics of Instagram
2. Finding a Niche
3. Finding Popular Account with that Niche
4. Analyzing Popular Accounts with that Niche
5. Creation of a Special E-Mail Address
6. Creation of Your New Instagram Account
7. Naming your Instagram Account
8. Business or Normal Profile Decisions
9. Automation Software Explained
10. Where to run it?
11. Jarvee Explained
12. Tutorial on how to use Jarvee
13. Reposts
14. Hashtags
15. Likes
16. Follows
17. Engagement/Shoutout Groups
18. Ads
19. Shadowbans
20. Wait for it

Understanding the Mechanics of Instagram

Instagram has grown to become the most influential social network in the last few years, and the end of it's grown is nowhere in sight. It's practical, fun and everyone uses it. You follow your friends, you talk to them, you can call and video chat while sending fun memes from different pages. And that's exactly one of the main reasons for Instagram's popularity. The pages on it. Not pages of people and their pictures, pages that concern a specific niche. So that's where we come in. If you manage to create a successful page on Instagram your growth is guaranteed. Now in the following steps, I am gonna show you how to do exactly that.

Finding a Niche

Alright, so what is a Niche. A Niche is a specific topic that your Instagram account posts about. Imagine it like a theme. Some of the most popular niches include memes, movies, food, travel, luxury life, DIYs and more. Depending on what audience you want to cater to your need to find a niche. For example, a regular meme niche can be catering to a huge audience but also that means that there is a huge number of accounts already catering to that audience with the same niche, posting the same content you will be. Now, this can be a positive negative aspect. And it's up to you to decide what niche you want to use and what audience you want to cater to. Will it be a larger audience with a niche like memes and food or will it be a smaller one like a specific TV show or Book. Note that the success of your account will largely depend on your niche, so be careful what you choose.

Finding Popular Account with that Niche

You have chosen a niche? Great. Now your next step would be finding popular accounts with that niche. For example, if you chose memes, you will go on Instagram and find large meme accounts that suit your niche. Note that many of these accounts may be private, but follow them and wait for them to accept your request, then move on to the next step.

Analyzing the Popular Accounts with that Niche

When you do this, for whatever your niche is, take a good look at those accounts. Look at their profile picture. What does it look like? Keep it in mind. then look at their bio and remember the construction of it. Also, look for clues like usernames and content. When you have done all of this go ahead and make a large list of about 20 to 30 popular accounts with that niche and write down their usernames in a note somewhere.

Creation of a Special E-Mail Address

Now that you have your niche figured out and you know what you want to do with your soon to be made account, go ahead and create a special email exactly for that account. Later on, this will make you seem a lot more professional and it will draw in more brands. It can be a basic Gmail account with the name of your niche account. Make a combination, be creative, but also stay calm and professional when making it.

Creation of Your New Instagram Account

So you have your custom email, now go ahead and open Instagram on your phone. Find the sign-up button and by doing that create a new Instagram account. You will be prompted to type in your new email and create a new username, also put in a profile picture and a bio. You can put anywhere in there for now, and just go ahead and create the account.

Naming your Instagram Account

Great, you have successfully created an Instagram account. You have chosen a niche and now it's time to choose the most important part of it. Your username. Your username needs to in a way express your niche and relate to it. This is why I said that you should analyze the names of those bigger accounts with niches. Depending on what niche you chose, go back to the names of those accounts once again and create your variation username that encompasses your niche in a good way. Use those accounts as an example.

Now that you have done that go ahead and create a profile picture and bio for your account. Once again, go back to the accounts you analyzed and create a profile picture unique to your account but still take reference from those other accounts. As far as the bio goes do the same.

Business or Normal Profile Decisions

You have all that figured out and now you are the proud owner of an Instagram account that will soon cater to a specific audience with a specific niche. It's time to make another small decision. You can decide if you want your account to be a business account which will let you track your visitors better and get more analytics but by doing that it will never be private. Or you can just leave it the way it is with limited analytics but after some time you can make it private if you wish to do so. Note that you can switch between these changes at any point of owning the account.

Automation Software Explained

Now you don't wanna be posting all that content manually by yourself, right? Yes, exactly, you don't. That is why automation software exists. Automation software for Instagram is a program that you use to automatically post, follow and like using your Instagram account. This is great because that means that you don't have to do absolutely anything after setting it up and you can just let it run.

So you might ask yourself: What will the automation software post? Now that's where the list of those usernames of big accounts you made comes in. It will repost their posts. So for example, you can make it repost 2-day old content from an account you want. It will switch between accounts on the list and repost something from each one. And it is extremely customizable so you can make it suite your niche. For example if you are a luxury or food content page with that niche you can report content from another account that is even a year old, because it's food and that content is just as viable 1 or 2 years later after that account posted it, and this will ensure you bring something fresh to the timelines of your followers. But for example, if you are a meme page with that niche you can only post posts that are maybe 3 days old max because that content has a shorter lifespan and more memes emerge every day. Each one has a limited shelflife of a few days to a week max.

Where to run it?

So where do you run your automation software? You have 2 options. You can either run it on your PC and leave it on as much as you want. Note that this may cause a slower growth of your account if the program is not running 24/7, or you can run it on an RDP. An RDP is a private server online that is online 24/7 so you can host programs there without them being interrupted. RDPs do come with a cost tho, ranging from a few dollars per month to much more. This is why I am giving you these two

options and it is up to you to decide. Will you keep your PC on days on end or will you purchase an RDP and host the program for automation there? Either one of these will work. You could also get one free year of a VPS which is essentially the same as an RDP with this tutorial:

Free Server for a Year Tutorial: <https://jarvee.com/knowledge-base/get-free-vps-1-year/>

What is Jarvee?

Now I personally use Jarvee as the automation software of choice but you can use some other one if you will. Altho I strongly recommend Jarvee and I will explain how to use it here. Toi get Jarvee use can either buy it or download a cracked version from this Nulled Thread:

Nulled Jarvee Thread: <https://www.nulled.to/topic/840465-jarvee-2-cracked-latest-version-best-mass-planner-alternative-instagram-bot/>

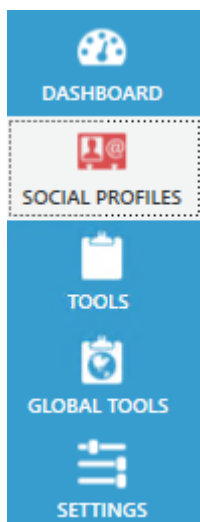

Jarvee is highly customizable and works great on VPSs, RDPs or your own laptop or PC.

How to use Jarvee?

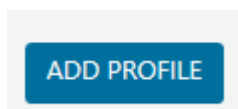

Using Jarvee is very simple but it can take some getting used to.

When you first open it you will be prompted with a screen asking to log in. Considering you have the cracked version, all you have to do is write in a random email and a simple password you can remember. The password might become important later on.

Now you are going to go to the “Social Profiles” prompt on the sidebar.

Now click add profile.

A window will pop up and we are gonna choose Instagram.

✕

[VERIFY ACCOUNT](#)
[BROWSE](#)

In the "Username" section enter your username and in the "Password" section enter your password. Click Verify Account and now it should say "Valid" and you will be logged in.

Congrats! You have set up the first part of Jarvee.

Now let's get into the settings.

First, we will be looking at Reposts.

Repost is a tool on Jarvee that will repost the images from other accounts. This is great for copying niche accounts and growing yours fast.

I use these settings for one of my most successful accounts but feel free to change them up a bit.

STATUS STARTED Next run: 9/12/2019 8:58:47 PM 0.33 reposts/hour 8 reposts/day* [HOW IT WORKS](#)

RUN TIMERS

Wait between and minutes before each new operation.

Repost between and posts per operation. With a delay between - seconds between each repost.

Execute between and [Add Interval](#) Randomize intervals daily

Days of the week when to operate

Sunday Monday Tuesday Wednesday Thursday Friday Saturday Rotate days

REPOST LIMITS

Repost - per day(0=no limit) Increase daily with until it reaches max Repost per day.

Repost - per hour. (0 = no limit) Increase daily with until it reaches max Repost per hour.

Repost users most recent posts

Limit maximum number of Reposts per user

POST FILTERS

Repost only Images Videos ImageOrVideo Albums All

Filter posts by number of likes

Filter posts by number of comments

Repost only if the original caption contains any of the following words (separate words by a comma, you can use wildcards as well)

Do not repost if the original caption contains specific words (separate words by a comma, you can use wildcards as well)

Blacklisted users (separate usernames and/or userids by a comma)

Do not repost Non English posts

Repost only if engagement is greater than

REPOST SETTINGS

Send posts to campaign instead of posting on the wall

Unique image alteration level

Post as part of your story instead of on the wall

Post on wall and in story Share wall post in story

Share with specific users instead of post on the wall

Delete the post if caption is empty

Delete the post after x hours

Crop image instead of adding white borders

Choose a random post from the most recent user's posts

Repost original post location

Repost original video cover

Tag original post user

Change Profile Picture after repost

Tag specific users in your post

Enable Watermark on image posts

In the sources, window add your list of famous accounts you made earlier and set it to repost their images.

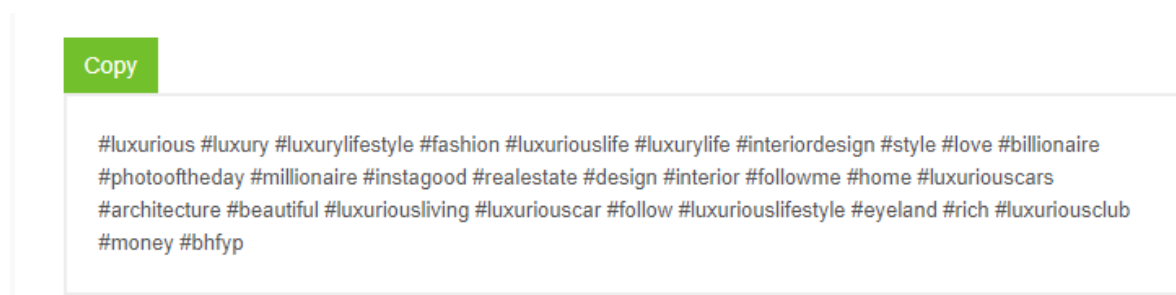

And that's it for reposts, add a good default description to the images with good hashtags and your following will grow.

Hashtags

But what makes good hashtags? Depending on the niche you can find good hashtags simply by googling them.

For example, these are some of the best Luxury hashtags.

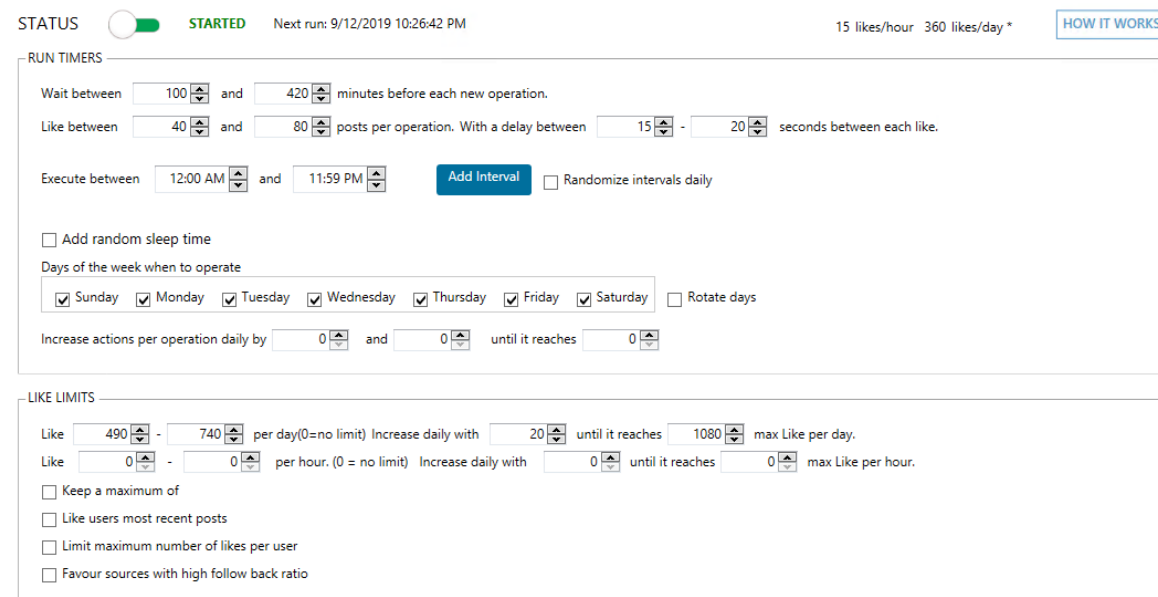

<http://best-hashtags.com/hashtag/luxurious/>

Add these to your default description and it will be used for reposts.

Likes

As par as the automated likes go the process is very similar to setting up the reposts as far as settings go. These are my go-to settings. You can change them up a bit but make sure your follows. likes and comments when setting them up are in measure and not overdone. Instagram blocks suspicious activity so overdoing an action can cause your account to be shut down.

A screenshot of a social media automation tool's settings page. The page is titled "STATUS" and shows a green toggle switch labeled "STARTED". The next run is scheduled for 9/12/2019 10:26:42 PM. The current performance is 15 likes/hour and 360 likes/day*. There is a "HOW IT WORKS" button.

RUN TIMERS

Wait between 100 and 420 minutes before each new operation.

Like between 40 and 80 posts per operation. With a delay between 15 - 20 seconds between each like.

Execute between 12:00 AM and 11:59 PM. Add Interval. Randomize intervals daily.

Add random sleep time

Days of the week when to operate

Sunday Monday Tuesday Wednesday Thursday Friday Saturday Rotate days

Increase actions per operation daily by 0 and 0 until it reaches 0

LIKE LIMITS

Like 490 - 740 per day(0=no limit) Increase daily with 20 until it reaches 1080 max Like per day.

Like 0 - 0 per hour. (0 = no limit) Increase daily with 0 until it reaches 0 max Like per hour.

Keep a maximum of

Like users most recent posts

Limit maximum number of likes per user

Favour sources with high follow back ratio

Follows

Once again, the follows out of all of these need to be balanced the most. Nothing too much, not following many people a day, especially in the beginning of the account. Play with the settings and see what works for you.

STATUS STOPPED 14.58 follows/hour 350 follows/day * [HOW IT WORKS](#)

RUN TIMERS

Wait between and minutes before each new operation.

Follow between and people per operation. With a delay between - seconds between each follow.

Execute between and [Add Interval](#) Randomize intervals daily

Add random sleep time

Stop the tool for minutes after follows

Days of the week when to operate

Sunday Monday Tuesday Wednesday Thursday Friday Saturday Rotate days

Increase followed people per operation daily by and until it reaches

FOLLOW LIMITS

Follow - per day(0=no limit) Increase daily with until it reaches max Follow per day.

Follow - per hour. (0 = no limit) Increase daily with until it reaches max Follow per hour.

Enable automatic follow/unfollow

Send to extracted users

Favour sources with high follow back ratio

USER FILTERS

Skip Non English Users

User has profile image

User has a minimum number of posts User has a maximum number of posts

And that finishes our Jarvee tutorial. Just run all of these and let them do their thing.

Engagement/Shoutout Groups

When your account starts gaining traction you will eventually be invited into engagement groups by people who's account is the same niche as yours and the approximately same size. These are Instagram group chats where everyone sends their latest posts so the others can like it and comment and by doing that boost their engagement and the engagement of others. It's a mutually beneficial relationship and you can see what accounts similar to your post, and what you can do better on your account.

Ads

Now we get to the money part. This is the simplest part. It's basic and it works so well. So, you have managed to build an account with 20 thousand followers. That is great! Now especially if your engagement rates are good you will start getting Business inquiries in your DMs from businesses who want to promote their products on your page. They will ask for your rates and depending on what you want to charge you tell them. After you agree to rates per post, they will pay you on the decided payment method and you will post their promo on your page. And congrats, you made money! This works wonders because especially high engagement accounts can charge a lot for their ads, so you

can make a lot of money. If you are wondering about your rates, you can get a rough estimation here:

<https://influencermarketinghub.com/instagram-money-calculator/>

And get some insight here:

<https://contentcareer.com/blog/how-much-do-influencers-charge-per-instagram-post/>

Shadowbans

And the last thing I want to cover is shadowbans. Shadowban is a form of an unofficial Instagram ban that happens from time to time. If you post something Instagram doesn't as they can shadowban you. Basically, for some time, the ban lasts your posts will only show up in the feeds of a small % of your followers. So because of this be sure to not post something that's against the Instagram rules and try to not be involved in controversial topics.

Wait for it

From that moment on, that's it. You have set everything up. You know the tips, tricks, and everything there is to know on how to run a successful Instagram account. All you have to do now is wait. Followers will not come overnight. It might take a period before you grow your Instagram niche account to a huge size. Be careful, smart and good luck!
