

Question ✔ Answered

While there are innumerable positives that can be drawn from these Game Changing Technologies, it is imperative that we also take a look at the adverse effects that these technologies cause. Like many other things, there are always two sides of the story. On one end, productivity numbers received a massive boost thanks to new technologies. On the other end, there is a question of whether the same numbers are not telling the whole story. While new technologies, even new applications being downloaded, have made an impact, some of them have caused other people to rely too much on technology and not develop their own skills anymore. Technology, in some ways, has become workers of our time instead of serving as a tool to help us. Quite possibly, the worst effect of it is the accessibility of such technologies. With only a fraction of the people in the world having the chance to know how to take advantage of these new technologies, what happens to those who are not as fortunate? It matters that we look into all the effects of technology. It is only through looking at the other side that we can actually discover how to improve what we currently have and develop new technologies that would benefit everyone. What do you think is the way forward with the Game Changing Technologies that we currently have? What are its flaws, and how can these be improved further? *

In this current time and age technology has come a very long way we have created game changing technologies in different fields of our daily lives. In one major aspect is in communication. We have developed a technology that will make communication much easier. A technology that became a basic necessity for us. A technology that made huge impact in everything that we do. This technology is the Smart phone. Today, Smart phones are not only for basic communication. It is also use in different ways and manners. Such as Computing, Socialization, Controller, Camera, health monitoring and lots more. Almost everything that you can think of is can be done by a Smart phone. It is believe that smart phone was one of the biggest inventions of our era. A game changing technology all of a sudden life became easier, faster and innovative with the introduction of smart phones and it is still growing to the point that we can no longer see the limitation it can go to. But as much as its positive effects on us. It also gives us plenty of negatives that we encounter as we use it. One of these is our Privacy Security. Living in an open world we have now. That all things. All smart phones, all humans are connected via the internet. Our data privacy is in jeopardy. With our smart phones always connected to the internet it is easy and faster for the hackers or other people to get our data and personal information with it. Sometimes, even our most trusted apps are using our data or information without us knowing it. It is one of the flaws of emerging technology of smart phones. Our Privacy and Information our no longer safe in our hands. Another negative effect of Growing tech of smart phones is that it became so smart to the point that it is now way smarter than other people. Some people tend to forget to learn new things and skills because the depend more on their smart phone and other technologies that they have. People became lazy doing things on their own that without smart phones they can't live or even know how survive in this age. This will lead us to another flaw of it. Mental and health conditions. With so much things that we can get from a smart phone it tends to makes us believe that we our Great, Smart, or better than we think of. That is why some people without their smart phones and face the reality have shock and self-pity that they were not they used to know themselves. People are also used to spend plenty of time using their Smart phones that I can and will give them health conditions bad to their body particularly on their eyes cause by looking at the screen for a very long time. With all that I believe that this technology can be improve more so that all its flaws can be fixed. Hence, adding more security features and reminders for its user to be informed that some apps or people may get their data and information if they don't use it carefully. Also, If it develops health friendly LCD or monitors It can address the flaws in health conditions. Technologies are continuing to improve day by day without any limitations. It improves a lot things in our lives, environment and culture. We need technology in our life and we cannot stop it from improving. The only way we can do is improve it much better to the point that it doesn't have any flaws and negatives.
