

---

Identify a business-related activity which involves experimental method of data collection  
Test market

Which method is the most time consuming?  
Interview Method

If sample size is 5,000, when margin of error is 1%, what is the size of the population?  
10,000

Find the margin of error used if sample size computed is 50 at and population is 100.  
0.1

Census of population is an example of  
Registration Method

Compute for the sample size, given the following data: Population = 1000, margin of error 10%.  
91

Identify the technique in which a researcher studies the social process as they happen in the field.  
Observation Method

Find the population used if sample size computed is 90 at 10% margin of error  
900

Which statement is false?  
Stratified Random Sampling can be used when the members of the population belong to the same category, class or group.

Which statement is false?  
Tabulation can be classified as special. In this type classification, the data are classified according to place. This includes town, district, state and country.
