

*Unified Design of Steel Structures, 3rd Edition*

# Selected Homework Problem Answers

**Chapter 1 Selected Answers**

1. Where could one find information about the provisions of the 1961 AISC *Specification*?

*For the answer, see Section 1.2*

3. Which chapter of the AISC *Specification* provides information about:

- a. general requirements for analysis and design
- b. design of members for flexure
- c. design of connections
- d. design of members for combined forces and tension
- e. requirements for design of structures to ensure stability

*For the answer, see Section 1.2*

5. List and define the three basic goals of a design team for the design of any building.

*For the answer, see Section 1.5*

7. Provide an example of each of the following types of construction. To the extent possible, identify specific buildings in your own locale.

- a. Bearing wall
- b. Beam-and-column
- c. Long-span
- d. High-rise
- e. Gable-frame

*For the answer, see Section 1.7*

9. List and describe two types of lateral load resisting systems commonly used in beam-and-column construction.

*For the answer, see Section 1.7*

11. Provide a simple definition of structural design.

*For the answer, see Section 1.8*

13. Give a description of both the LRFD and ASD design approaches. What is the fundamental difference between the methods?

*For the answer, see Sections 1.9 and 1.10*

15. Identify three sources of variation in the strength of a structure and its components.

*For the answer, see Section 1.12*

17. Provide three examples of serviceability limit states.

*For the answer, see Section 1.13*

**Chapter 2 Selected Answers**

1. Name and describe five basic types/sources of building loads.

*For the answer, see Section 2.2*

3. What is one source you can consult to find the snow load data for a particular region as well as maps showing wind gust data to allow you to calculate wind loads?

*For the answer, see Sections 2.2, 2.3*

5. What analysis method allows the designer to visualize the load on a particular structural element without performing an actual equilibrium calculation?

*For the answer, see Section 2.3*

7. In determining the snow load on a structure, what value that can be obtained from the applicable building code is multiplied by a series of factors to obtain the roof snow load?

*For the answer, see Section 2.3.3*

9. Name four factors that must be taken into account in converting wind speed data referenced by the building code into wind pressure on a given building.

*For the answer, see Section 2.3.4*

11. If a response modification factor of 3 is chosen in the design of a steel building to resist seismic loads, what design specification should be consulted?

*For the answer, see Section 2.3.5*

13. Strength load combinations that are incorporated by the LRFD method take into account what two factors?

*For the answer, see Section 2.4*

15. Using ASCE 7, determine the minimum uniformly distributed live load for library stacks.

*For the answer, see Table 2.2 or ASCE 7 Table 4-1*

17. Determine the nominal uniformly distributed self-weight of a 6 in. thick reinforced concrete slab.

*Use Table 2.1 to obtain 75 psf*

19. If the framing plan shown in Figure P2.19 were for the roof of a structure that carried a dead load of 55 psf and a roof live load of 30 psf, determine the required moment and shear strength for beams and girders, and axial strength for columns, as required below for (a) design by LRFD and (b) design by ASD. Do not reduce the roof live loads.

- i. The girder on column line A between column lines 1 and 2 if the deck spans from line A-A to B-B.
- ii. The beam on column line 3 between column lines B and C if the deck spans from line 2-2 to 3-3 to 4-4.
- iii. The column at the corner on lines 1 and E.

**Chapter 2 Selected Answers, Problem 19, cont'd.**

- iv. The column on the edge at the intersection of lines 1 and B.
- v. The interior column at the intersection of column lines C and 2.

Part a. uniform load for LRFD  $w_u = 1.2(55) + 1.6(30) = 114$  psf

Part b. uniform load for ASD  $w_a = 55 + 30 = 85$  psf

No Roof Live Load Reductions

	<b>Part a. LRFD</b>	<b>Part b. ASD</b>
<b>i.</b>	$M_u = 111$ ft-kips $V_u = 17.8$ kips	$M_a = 83.0$ ft-kips $V_a = 13.3$ kips
<b>ii.</b>	$M_u = 223$ ft-kips $V_u = 35.6$ kips	$M_a = 166$ ft-kips $V_a = 26.6$ kips
<b>iii.</b>	$P_u = 17.8$ kips	$P_a = 13.3$ kips
<b>iv.</b>	$P_u = 35.6$ kips	$P_a = 26.6$ kips
<b>v.</b>	$P_u = 71.3$ kips	$P_a = 53.1$ kips

**Chapter 3 Selected Answers**

1. When was the first AISC *Specification* published and what was its purpose?

*For the answer, see Section 3.2*

3. Sketch and label a typical stress-strain curve for steel subjected to a simple uniaxial tension test.

*For the answer, see Section 3.3; base on Figure 3.5*

5. What happens to a steel element when it is loaded beyond the elastic limit and then unloaded?

*For the answer, see Section 3.3.*

7. Sketch and label 10 different structural shape cross sections whose properties are given in the AISC *Manual*.

*For the answer, see Section 3.4; base on Figure 3.7*

9. What are the nominal and actual depths of a W16×100 wide-flange member? What is the weight of this member per linear foot? (Hint: Use your AISC *Manual*.)

*(Partial answer) from Manual Table 1-1, the actual depth is 17.0 in.*

11. What are the nominal and actual depths of a W14×730 wide-flange member? Compare these to the nominal and actual depths of a W14×145. (Hint: Use your AISC *Manual*.)

*(Partial answer) from Manual Table 1-1, for the W14×730, the actual depth is 22.4 in.; for the W14×145, the actual depth is 14.8 in.*

13. What are the nominal and actual depths of a W10×112 wide-flange member? Compare these to the nominal and actual depths of a W10×12. (Hint: Use your AISC *Manual*.)

*(Partial answer) from Manual Table 1-1, for the W10×112, the actual depth is 11.4 in.; for the W10×12, the actual depth is 9.87 in.*

15. What are the actual depth, flange width, and flange thickness of a W27×84? (Hint: Use your AISC *Manual*.)

*(Partial answer) from Manual Table 1-1, the flange width is 10.0 in., and the flange thickness is 0.64 in.*

17. What are the actual depth, average flange thickness, and web thickness of a C12×30? (Hint: Use your AISC *Manual*.)

*(Partial answer) from Table 1-5, the actual depth is 12.0 in.; the average flange thickness is 0.501 in.*

19. What are the cross sectional area, leg dimensions and thickness of an L8×8×5/8? (Hint: Use your AISC *Manual*.)

*From Manual Table 1-7, the cross sectional area is 9.69 in<sup>2</sup>; the leg dimensions are both 8 in., and thickness is 5/8 in.*

**Chapter 3 Selected Answers, cont'd.**

- 21.** What are the cross sectional area and weight per linear foot of an L5×3×1/2 member? (Hint: Use your AISC Manual.)

*From Manual Table 1-7, the cross sectional area is 3.75 in<sup>2</sup>, and the weight per linear foot is 12.8 lb/ft.*

- 23.** What are the actual depth, flange width, flange thickness, and stem thickness of a WT10.5×22? Compare to the properties for a W21×44. (Hint: Use your AISC Manual.)

*(Partial answer) from Manual Table 1-8, the actual depth is 10.3 in., stem thickness is 0.350 in. Compare to actual depth of a W21×44, from Manual Table 1-1, of 20.7 in., web thickness of 0.350 in.*

- 25.** What are the outside dimensions of a rectangular HSS8×6×1/2? What are the nominal and design wall thicknesses? (Hint: Use your AISC Manual.)

*(Partial answer) from Manual Table 1-11, the design wall thickness is 0.465 in.*

- 27.** What is the outside diameter of a round HSS10.750×0.375? What are the nominal and design wall thicknesses? (Hint: Use your AISC Manual.)

*(Partial answer) from Manual Table 1-13, the design wall thickness is 0.349 in.*

- 29.** What are the outside diameter and nominal and design wall thicknesses of a Pipe 4 xx-Strong? (Hint: Use your AISC Manual.)

*(Partial answer) from Manual Table 1-14, this member has a design thickness of 0.628 in.*

- 31.** What is the difference between a rectangular bar section and a plate?

*For the answer, see Section 3.4.3*

- 33.** What effects does the addition of carbon have on steel?

*For the answer, see Section 3.5*

- 35.** What grade of steel is most commonly used today in the production of W-shapes, and what are its yield stress and tensile stress?

*(Partial answer) from Section 3.6, A992, 50 ksi*

- 37.** What are the differences between an A500 Grade C rectangular HSS and an A1085 rectangular HSS?

*(Partial answer), from Section 3.6 and Figure 3.10, they have the same specified minimum yield stress, but different tensile stress. A1085 also has a specific range for yield stress, from 50 to 70 ksi.*

- 39.** What grade of steel is typically used for high-strength bolts in construction?

*For the answer, see Section 3.6.3*

**Chapter 4 Selected Answers**

1.  $A_g = 6 \text{ in}^2$ ;  $A_n = 5.25 \text{ in}^2$
3.  $A_g = 3.75 \text{ in}^2$ ;  $A_n = 3.01 \text{ in}^2$
5.  $A_g = 7.5 \text{ in}^2$ ;  $A_n = 6.41 \text{ in}^2$
7.  $A_g = 3.75 \text{ in}^2$ ;  $A_n = 2.88 \text{ in}^2$
9.  $A_g = 6.49 \text{ in}^2$ ;  $A_n = 4.80 \text{ in}^2$
11.  $A_g = 9.11 \text{ in}^2$ ;  $A_n = 7.50 \text{ in}^2$
13.  $A_g = 7.34 \text{ in}^2$ ;  $A_n = 5.72 \text{ in}^2$
15.  $A_g = 11.8 \text{ in}^2$ ;  $A_n = 9.75 \text{ in}^2$
17.  $w_n = 8.04 \text{ in}$
19.  $A_n = 4.13 \text{ in}^2$
21.  $A_n = 5.98 \text{ in}^2$
23.  $U = 0.85$ ;  $A_e = 10.8 \text{ in}^2$
25.  $U = 0.69$ ;  $A_e = 6.9 \text{ in}^2$
27.  $U = 0.838$ ;  $A_e = 4.96 \text{ in}^2$
29. (a)  $\phi P_n = 194 \text{ kips}$ ; (b)  $P_n/\Omega = 129 \text{ kips}$
31. (a)  $\phi P_n = 109 \text{ kips}$ ; (b)  $P_n/\Omega = 72.5 \text{ kips}$
33. (a)  $\phi P_n = 122 \text{ kips}$ ; (b)  $P_n/\Omega = 81.0 \text{ kips}$
35. (a)  $\phi P_n = 214 \text{ kips}$ ; (b)  $P_n/\Omega = 143 \text{ kips}$
37. (a)  $\phi P_n = 140 \text{ kips}$ ; (b)  $P_n/\Omega = 93.5 \text{ kips}$
39. (a) use L4×4×7/16; (b) use L5×3-1/2×1/2
41. (a) use WT6×26.5; (b) use WT6×26.5
43. (a) use W14×68; (b) use W14×68
45. (a)  $\phi R_n = 225 \text{ kips}$ ; (b)  $R_n/\Omega = 150 \text{ kips}$
47. (a)  $\phi R_n = 302 \text{ kips}$ ; (b)  $R_n/\Omega = 202 \text{ kips}$
49. (a)  $\phi R_n = 256 \text{ kips}$ ; (b)  $R_n/\Omega = 171 \text{ kips}$

**Chapter 5 Selected Answers**

1.  $P_{cr} = 373$  kips; theoretical column will buckle
3.  $P_{cr} = 10,250$  kips; theoretical column will yield at 5450 kips
5.  $KL = 19.2$  ft
7.  $KL = 12.3$  ft
9.  $(KL)_y = 6.53$  ft
11. elastic buckling -- (a)  $\phi P_n = 660$  kips; (b)  $P_n/\Omega = 439$  kips
13. inelastic buckling -- (a)  $\phi P_n = 145$  kips; (b)  $P_n/\Omega = 96.4$  kips
15. elastic buckling -- (a)  $\phi P_n = 1010$  kips; (b)  $P_n/\Omega = 672$  kips
17. inelastic buckling -- (a)  $\phi P_n = 158$  kips; (b)  $P_n/\Omega = 105$  kips
19. inelastic buckling -- (a)  $\phi P_n = 643$  kips; (b)  $P_n/\Omega = 428$  kips
21. part (i) -- (a)  $\phi P_n = 339$  kips; (b)  $P_n/\Omega = 226$  kips  
part (ii) -- (a)  $\phi P_n = 428$  kips; (b)  $P_n/\Omega = 285$  kips
23.  $L_{cx} = 203$  in;  $L_{cy} = 250$  in;  $L_{cy}$  (weak axis) controls column strength
25. Yes, W14×257 will carry load  
(a)  $\phi P_n = 2900$  kips  $> P_u = 2720$  kips; (b)  $P_n/\Omega = 1930$  kips  $> P_a = 1900$  kips
27. Yes, W8×67 will support load  
(a)  $\phi P_n = 241$  kips  $> P_u = 232$  kips; (b)  $P_n/\Omega = 160$  kips  $= P_a = 160$  kips
29. Yes, W16×77 will support load  
(a)  $\phi P_n = 510$  kips  $> P_u = 476$  kips; (b)  $P_n/\Omega = 340$  kips  $> P_a = 330$  kips
31. Yes, W24×131 will support load  
(a)  $\phi P_n = 1180$  kips  $> P_u = 1090$  kips; (b)  $P_n/\Omega = 784$  kips  $> P_a = 745$  kips
33.  $L_{cx} = 14$  ft;  $L_{cy} = 10$  ft; y-axis controls
35. For simplicity, brace every 5.00 ft
37.  $L_{cx} = 34.5$  ft -- (a)  $\phi P_n = 610$  kips; (b)  $P_n/\Omega = 406$  kips
39. weak axis controls, assuming braced frame out of plane  
(a) strong axis  $\phi P_n = 745$  kips,  $L_{cx} = 25.5$  ft; weak axis  $\phi P_n = 735$  kips,  $L_{cy} = 15$  ft  
(b) strong axis  $P_n/\Omega = 495$  kips,  $L_{cx} = 25.5$  ft; weak axis  $P_n/\Omega = 489$  kips,  $L_{cy} = 15$  ft
41. (a) select W12×45; (b) select W12×50
43. (a) select W10×60; (b) select W10×60

17. (a) and (b) -- Yes, pair of  $3 \times 1/4$  in. stiffener plates satisfy requirements  
(No required shear strength values provided, therefore  $\rho_w$  (maximum shear ratio) could not be calculated, and the answer is the same for LRFD and ASD.)
19. One possible solution:  $50 \times 9/16$  in. web plate,  $32 \times 1-3/4$  in. flange plates, no stiffeners

**Chapter 8 Selected Answers**

1. (a) Eq. (H1-1a) gives  $0.795 < 1.0$ , so yes, W14×90 is adequate  
(b) Eq. (H1-1a) gives  $0.801 < 1.0$ , so yes, W14×90 is adequate
3. (a) Eq. (H1-1a) gives  $0.922 < 1.0$ , so yes, W12×190 is adequate  
(b) Eq. (H1-1a) gives  $0.959 < 1.0$ , so yes, W12×190 is adequate
5. (a)  $M_D = 583$  kip-ft,  $M_L = 1750$  kip-ft; (b)  $M_D = 582$  kip-ft,  $M_L = 1750$  kip-ft
7. (a) Eq. (H1-1a) gives  $0.795 < 1.0$ , so yes, W14×90 is adequate  
(b) Eq. (H1-1a) gives  $0.801 < 1.0$ , so yes, W14×90 is adequate
9. (a) Eq. (H1-1a) gives  $0.922 < 1.0$ , so yes, W12×190 is adequate  
(b) Eq. (H1-1a) gives  $0.959 < 1.0$ , so yes, W12×190 is adequate
11. (a) Eq. (H1-1a) gives  $0.999 < 1.0$ , so yes, W14×68 is adequate  
(b) Eq. (H1-1a) gives  $0.997 < 1.0$ , so yes, W14×68 is adequate
13. (a) Eq. (H1-1a) gives  $0.878 < 1.0$ , so yes, W14×120 is adequate  
(b) Eq. (H1-1a) gives  $0.885 < 1.0$ , so yes, W14×120 is adequate
15. (a) Eq. (H1-1a) gives  $1.15 > 1.0$ , so no, W14×48 is not adequate  
(b) Eq. (H1-1a) gives  $1.16 > 1.0$ , so no, W14×48 is not adequate
17. (a) Eq. (H1-1b) gives  $0.467 < 1.0$ , so yes, column in upper story is adequate  
Eq. (H1-1b) gives  $0.318 < 1.0$ , so yes, column in lower story is adequate  
(b) Eq. (H1-1b) gives  $0.691 < 1.0$ , so yes, column in upper story is adequate  
Eq. (H1-1a) gives  $0.524 < 1.0$ , so yes, column in lower story is adequate
19. (a) Eq. (H1-1b) gives  $0.525 < 1.0$ , so yes, left column is adequate  
Eq. (H1-1a) gives  $0.479 < 1.0$ , so yes, interior column is adequate  
By inspection, right column is also adequate  
(b) Eq. (H1-1b) gives  $0.541 < 1.0$ , so yes, left column is adequate  
Eq. (H1-1a) gives  $0.498 < 1.0$ , so yes, interior column is adequate  
By inspection, right column is also adequate
21. Eq. (H1-1a) gives  $1.05 > 1.0$ , so no, W14×74 is not adequate
23. Eq. (H1-1a) gives  $0.900 < 1.0$ , so yes, W10×60 is adequate
- 25a. Use W14×176; eq. (H1-1a) gives  $0.925 < 1.0$
- 25b. Use W14×176; eq. (H1-1a) gives  $0.919 < 1.0$

**Chapter 8 Selected Answers, cont'd.**

- 27a.** Use W14×176; eq. (H1-1a) gives  $0.971 < 1.0$
- 27b.** Use W14×176; eq. (H1-1a) gives  $0.972 < 1.0$
- 29.** (a) Yes, given structure is adequate; (b) Yes, given structure is adequate
- 31.** (a) Use 5/8 in. rod,  $A = 0.307 \text{ in}^2$ ; (b) Use 3/4 in. rod,  $A = 0.442 \text{ in}^2$  (11/16 in. would work, but not a standard diameter)
- 33.** (a)  $P_{br} = 5.42 \text{ kips}$ ,  $\beta_{br} = 362 \text{ kip/ft}$ ; (b)  $P_{br} = 3.74 \text{ kips}$ ,  $\beta_{br} = 374 \text{ kip/ft}$
- 35.** (a) Eq. (H1-1b) gives  $0.786 < 1.0$ , so yes, W18×86 is adequate  
(b) Eq. (H1-1b) gives  $0.788 < 1.0$ , so yes, W18×86 is adequate

**Chapter 9 Selected Answers**

1. (a)  $\phi M_n = 376$  kip-ft, PNA in concrete; (b)  $M_n/\Omega = 250$  kip-ft, PNA in concrete
3. (a)  $\phi M_n = 885$  kip-ft, PNA in concrete; (b)  $M_n/\Omega = 589$  kip-ft, PNA in concrete
5. (a)  $\phi M_n = 456$  kip-ft, PNA in flange; (b)  $M_n/\Omega = 304$  kip-ft, PNA in flange
7. (a)  $\phi M_n = 10,100$  kip-ft, PNA in concrete; (b)  $M_n/\Omega = 6710$  kip-ft, PNA in concrete
9. (a)  $\phi M_n = 122$  kip-ft, PNA in concrete; (b)  $M_n/\Omega = 81.4$  kip-ft, PNA in concrete
11. (a)  $\phi M_n = 551$  kip-ft, PNA in flange; (b)  $M_n/\Omega = 366$  kip-ft, PNA in flange
13. (a)  $\phi M_n = 788$  kip-ft, PNA in web; (b)  $M_n/\Omega = 524$  kip-ft, PNA in web
15. (a)  $\phi M_n = 626$  kip-ft, PNA in flange; (b)  $M_n/\Omega = 416$  kip-ft, PNA in flange
17. (a)  $\phi M_n = 1850$  kip-ft, PNA in flange; (b)  $M_n/\Omega = 1230$  kip-ft, PNA in flange
19. (a)  $\phi M_n = 447$  kip-ft, PNA in flange; (b)  $M_n/\Omega = 298$  kip-ft, PNA in flange  
And plot  $M_n$  versus  $V'_q$  for Problems 5, 14, and 19
21. (a) Use W12×14 with 16 – 3/4 in. studs; (b) Use W12×14 with 20 – 3/4 in. studs
23. (a) Use W16×26 with 10 – 3/4 in. studs; (b) Use W16×26 with 10 – 3/4 in. studs
25. (a) W14×26 with 32 shear studs, W16×26 with 28 shear studs; same lb/ft but W14 requires more shear studs  
(b) W14×26 with 36 shear studs, W16×26 with 32 shear studs; same lb/ft but W14 requires more shear studs
27. (a)  $\phi M_n = 507$  kip-ft; (b)  $M_n/\Omega = 337$  kip-ft
29. (a) Use W12×14 with 18 – 3/4 in. studs; (b) Use W12×14 with 20 – 3/4 in. studs
31.  $\Delta_L = 0.418$  in.
33. (a)  $\Delta_L = 0.436$  in.; (b)  $\Delta_L = 0.408$  in.
35. (a)  $\phi P_n = 1540$  kips; (b)  $P_n/\Omega = 1030$  kips
37. (a)  $\phi P_n = 3420$  kips; (b)  $P_n/\Omega = 2280$  kips
39. (a)  $\phi P_n = 900$  kips; (b)  $P_n/\Omega = 600$  kips

**Chapter 10 Selected Answers**

1. (Partial answer) Nominal shear strength for A325-N bolts

Bolt diameter (in)	5/8	3/4	7/8	1
Nominal bolt area (in <sup>2</sup> )	0.307	0.442	0.601	0.785
Nominal shear strength, $R_n$ (kips)	16.6	23.9		

3. (Partial answer) Nominal shear strength for A490-N bolts

Bolt diameter (in)	5/8	3/4	7/8	1
Nominal bolt area (in <sup>2</sup> )	0.307	0.442	0.601	0.785
Nominal shear strength, $R_n$ (kips)	20.9	30.1		

5. (Partial answer) Design shear strength (LRFD)

Bolt diameter (in)		5/8	3/4	7/8	1
Nominal bolt area (in <sup>2</sup> )		0.307	0.442	0.601	0.785
Grade	N or X	$F_{nv}$ (ksi)	Design shear strength, $\phi R_n$ (kips)		
A325	N	54	12.4	17.9	24.3
A325	X	68	15.7	22.5	
A490	N				
A490	X				

7. (Partial answer) Design shear strength (LRFD)

Bolt diameter (in)		5/8	3/4	7/8	1
Nominal bolt area (in <sup>2</sup> )		0.307	0.442	0.601	0.785
Grade	N or X	$F_{nv}$ (ksi)	Design shear strength, $\phi R_n$ (kips)		
F1852	N	54	12.4	17.9	24.3
F1852	X	68	15.7	22.5	
F2280	N				
F2280	X				

9. (a)  $\phi R_n = 107$  kips; (b)  $R_n/\Omega = 71.5$  kips

11. (a)  $\phi R_n = 130$  kips; (b)  $R_n/\Omega = 87.0$  kips

13. (a)  $\phi R_n = 170$  kips; (b)  $R_n/\Omega = 113$  kips

**Chapter 10 Selected Answers, cont'd.**

- 15. (a)  $\phi R_n = 122$  kips; (b)  $R_n/\Omega = 81.0$  kips
- 17. (a)  $\phi R_n = 260$  kips; (b)  $R_n/\Omega = 174$  kips
- 19. solution not provided
- 21. solution not provided
- 23. (a)  $\phi R_n = 134$  kips; (b)  $R_n/\Omega = 89.8$  kips
- 25. (a)  $\phi R_n = 53.7$  kips; (b)  $R_n/\Omega = 35.7$  kips
- 27. (a)  $\phi R_n = 146$  kips; (b)  $R_n/\Omega = 97.2$  kips
- 29. (a)  $\phi R_n = 167$  kips; (b)  $R_n/\Omega = 112$  kips
- 31. (a)  $\phi R_n = 89.2$  kips; (b)  $R_n/\Omega = 59.5$  kips
- 33. (a)  $\phi R_n = 218$  kips; (b)  $R_n/\Omega = 145$  kips
- 35. (a)  $\phi R_n = 109$  kips; (b)  $R_n/\Omega = 72.5$  kips
- 37. (a)  $\phi R_n = 130$  kips; (b)  $R_n/\Omega = 86.5$  kips
- 39. (a)  $\phi R_n = 214$  kips; (b)  $R_n/\Omega = 142$  kips
- 41. (a)  $\phi R_n = 234$  kips; (b)  $R_n/\Omega = 156$  kips
- 43. (a)  $\phi R_n = 297$  kips; (b)  $R_n/\Omega = 198$  kips
- 45. (a)  $\phi R_n = 376$  kips; (b)  $R_n/\Omega = 251$  kips

**Chapter 11 Selected Answers**

1. 3 bolts, pair of 3-1/2×3-1/2×5/16×8.5 in. angles, edge distances of 1.25 in.
3. 5 bolts, pair of 3-1/2×3-1/2×5/16×14.5 in. angles, edge distances of 1.25 in.
5. 4 bolts, pair of 3-1/2×3-1/2×3/8×11.5 in. angles, edge distances of 1.25 in.
7. 6 bolts, pair of 3-1/2×3-1/2×5/16×17.5 in. angles, edge distances of 1.25 in.
9. 4 bolts, pair of 3-1/2×3-1/2×5/16×11.5 in. angles, edge distances of 1.25 in.
11. 4 bolts, pair of 3-1/2×3-1/2×5/16×11.5 in. angles, edge distances of 1.25 in.
13. 5 bolts, pair of 3-1/2×3-1/2×5/16×14.5 in. angles, edge distances of 1.25 in.; increase the distance of the top bolt to the coped edge to 1-5/8 in.
15. 3 bolts, pair of 3-1/2×3-1/2×5/16×8.5 in. angles, edge distances of 1.25 in.
17. 4 bolts, pair of 3-1/2×3-1/2×3/8×11.5 in. angles, edge distances of 1.25 in.
19. 3 bolts, pair of 3-1/2×3-1/2×5/16×8.5 in. angles, edge distances of 1.25 in., 3/16 in. fillet welds
21. 5 bolts, pair of 3-1/2×3-1/2×5/16×14.5 in. angles, edge distances of 1.25 in., 3/16 in. fillet welds
23. 4 bolts, pair of 3-1/2×3-1/2×5/16×11.5 in. angles, edge distances of 1.25 in., 3/16 in. fillet welds
25. 3 bolts, pair of 3-1/2×3-1/2×5/16×8.5 in. angles, edge distances of 1.25 in., 3/16 in. fillet welds
27. 4 bolts in a 3-1/2×3-1/2×3/8×11.5 in. angle, edge distances of 1.25 in.
29. 3-1/2×3-1/2×3/8×10 in. angle with 1/4 in. welds
31. 4-1/2×17-1/2×5/16 plate with 6 bolts and 1/4 in. fillet welds
33. 4-1/2×11-1/2×3/8 plate with 4 bolts and 1/4 in. fillet welds
35. L4×4×5/8 and 3/8 in. welds
37. The bolts are adequate by either LRFD or ASD.
39. Use a 1-1/4×6×1'-0" plate
41. Use a 1-1/2×24×2'-0" plate

**Chapter 12 Selected Answers**

- 1.** The flange plates of this connection are PL1/2×6-1/2×0'-10" with six 3/4 in. A325-N bolts and a pair of 1/4 fillet welds to the column flange.  
The web plate is PL3/8×3-1/2×0'-9" with three 3/4 in. A325-N bolts and a pair of 3/16 fillet welds to the column flange.
- 2.** None of the limit states checked require stiffeners or doubler plates. Therefore no stiffener or doubler plate design is required.
- 3.** The top flange plate is PL1-1/2×9-1/2×2'-2-1/4". The bottom flange plate is PL1-1/4×11-1/2×2'-2-1/4". Both plates are connected to the beam flange with 3/8 in. fillet welds for a length of 22-1/4 in. and a pair of 9/16 fillet welds to the column flange.  
The web plate is PL3/8×3-1/2×1'-0" with four 3/4 in. A325-N bolts and a pair of 3/16 fillet welds to the column flange.
- 4.** (Partial answer) A doubler plate is required for the web panel zone shear.
- 15.** CJP welds for the beam flanges; the web plate is PL3/8×3-1/2×0'-9" with three 3/4 in. A325-N bolts and a pair of 3/16 fillet welds to the column flange.
- 16.** None of the limit states checked require stiffeners or doubler plates. Therefore no stiffener or doubler plate design is required.
- 17.** CJP welds for the beam flanges; the web plate is PL3/8×3-1/2×1'-0" with four 3/4 in. A325-N bolts and a pair of 3/16 fillet welds to the column flange.
- 18.** (Partial answer) A doubler plate is required for the web panel zone shear.

**Chapter 13 Selected Answers**

1. What is the major difference between the analysis and design of a structure for wind and gravity loads and the analysis and design of a structure for seismic loads?

*For the answer, see Section 13.1*

3. How are the  $R$ ,  $C_d$ , and  $\Omega_o$  factors determined for a particular analysis?

*For the answer, see Section 13.1*

5. How is the  $R$  factor used to influence the seismic forces a structure is designed to resist?

*For the answer, see Section 13.1*

7. Explain the capacity design method in relation to material yield strength.

*For the answer, see Section 13.2*

9. What are the three primary types of moment frames considered in the Seismic Provisions? What are the respective values for  $R$ ,  $C_d$ , and  $\Omega_o$  for each of these systems?

*For the answer, see Section 13.3*

11. Which type of moment frame has a ductility requirement for connections of an interstory drift angle of 0.02 radians?

*For the answer, see Section 13.3*

13. List the three primary types of braced frame systems addressed in the Seismic Provisions and their corresponding values for  $R$ ,  $C_d$ , and  $\Omega_o$ .

*For the answer, see Section 13.4*

15. List some examples of CBF configurations.

*For the answer, see Section 13.4*

17. Where are the fuse elements located for eccentrically braced frames?

*For the answer, see Section 13.4*

19. Describe how SPSW resist seismic forces.

*For the answer, see Section 13.5*

21. How does the size of connections in seismic force resisting systems differ from that of connections designed for gravity and wind systems? Why?

*For the answer, see Section 13.6*

23. For seismic design, where should column splices be located and why?

*For the answer, see Section 13.6*
