

We are looking for someone with a strong engineering background who enjoys building high quality products used by millions. Ideally you have a good product sense, an understanding of the web ecosystem, strong personal initiative and the ability to prioritize. You can multitask and work under tight deadlines.

- Work in small cross-functional teams, collaborating owning your deliverables
- Use good agile practices to evolve ideas from concept to story to reality
- Work towards goal architecture, with high coding standards, test practices

We need the kind of developers that are passionate about learning, that go home at night and read blogs, try new technologies and frameworks, to continuously improve their skills and abilities.

About the role:

As an Android developer you must possess a passion for pushing mobile technologies to the limits and will work with our team of talented engineers to design and build the next generation of our mobile applications.

Responsibilities:

- Design and build advanced applications for the Android platform
- Collaborate with cross-functional teams to define, design, and ship new features.
- Work with outside data sources and API's
- Unit-test code for robustness, including edge cases, usability, and general reliability. Work on bug fixing and improving application performance.
- Continuously discover, evaluate, and implement new technologies to maximize development efficiency.

Requirements:

- BS/MS degree in Computer Science, Engineering or a related subject
- At least 2 years' proven software development experience
- Proven working experience in Android development
- Have published at least one original Android app Experience with Android SDK Experience working with remote data via REST and JSON
- Experience with third-party libraries and APIs
- Working knowledge of the general mobile landscape, architectures, trends, and emerging technologies Solid understanding of the full mobile development life cycle.
