
REFLECTION:

1. **What do you think are the major contributions of science and technology to Philippine nation building?**

The major contributions of science and technology to Philippine nation-building are linked to its socio-economic progress and its industrialization. Technology plays a fundamental role in wealth creation, improvement of the quality of life and real economic growth and transformation in any society.

Today there are no lives without science and technology. Today our lives become modern by the change in science and technology. They made our works easier. From brush to bed all are there because of the science and technology. Today our lives are totally depending on them. We can't imagine our lives without them. Now, Technology has become a very important part of our lives nowadays. During the past few years, technology has evolved in many ways and is probably without a doubt better than ever before. People are always trying to find something new that will improve our lives dramatically. Some of the creations that have really changed our lives are the computer, telephone, internet and electronic mail, television, cell phone and voice mail. Today, there is no work which cannot be done without the assistance of machines and there is not a single area of human activity where machines don't have to be used. No one can deny the fact that gadgets have not only simplified our lives but also made them more comfortable and luxurious. Science and technology play a significant role in the rise or building up a nation because when people are educated, they become masters of everything and thus this gives an important rise in the society. Nowadays life with technology is impossible for the youths they are strongly addicted to it. And they learn many new things and pass on to others they are good users as well as bad users.

Science is one of the most important channels of knowledge. It has a specific role, as well as a variety of functions for the benefit of our society, creating new knowledge, improving education, and increasing the quality of our lives. Science must respond to societal needs and global challenges. The role that science and technology has played in improving the life conditions across the globe is vivid, but the

benefit has to been harvested maximum by all countries. Science and technology have made life a lot easier and also a lot better with the advancement of medicines and analysis on diseases.

- 2. What specific government policy do you like the most in terms of contributing to the development of science and technology in the Philippines?**

Science and technology policy are one of the public policies that promotes appropriate funding to advance scientific and technological research and education, studies the impact of science and technology upon its citizenry, and prescribes regulation, if necessary.

The specific government policy that I like the most is REPUBLIC ACT NO. 2067 AN ACT TO PROMOTE SCIENTIFIC, ENGINEERING AND TECHNOLOGICAL RESEARCH, INVENTION AND DEVELOPMENT

Because, this policy encourages our scientist for innovation in technological advancement for the purpose of the public. Advancement in technology would somehow solve some of the issues like insufficient electrical distribution in all region and more.

- 3. What policies do you want the government to implement in the near future?**

We cannot determine what our future holds, however, I want the government to make education FREE for all who wants to study in a preparatory, elementary, high school and college. This includes all, particularly books, uniforms, shoes, and the needs in school and implements as early as 16, each individual will own a house which they can move in right after school but staying with a guardian, or they are at their legal age and married. They can work for the cost of this house right after they finished school and began paying taxes. The taxes they paid for 4 years is enough for them to fully owned a house. Special task and policies will be given for those disable or has terminal diseases.

I would also ask the government to allow everyone - no age limit, with or without experience, to work in any company and

the companies who would discriminate the abilities of anyone won't be able to continue their business and immediately ask to stop their operation.

This is to lessen the number of street kids, uneducated and lessen the number of crimes for everyone will be able to get a job. I would want for them to implement the increase of the salary doubled every year but should let them pay their taxes regularly for the next generation to experience the same.
