Identity theft is a scenario where a person pretent to be another one. The identity theft is mainly focussed on internet social media. The theft of identity can be in a various point of view. If a person creates an account in facebook with fake id , then it can be considered as identity theft. If a person eves drop into someone and grabs his id and password, then it is an identity theft.

Identity theft could be done in varous methods which are widely used. Here we discus varous ways to steal someones identity. One of the most common and easiest way is social engineering. What is social engineering? it is nothing but some one eves drop onto the victim while he/she is entering the identity details. Keystroke viruses are some sort of viruses that captures what ever the victim types. There are many more scenarios about identity theft.

What to do if you are a victim of identity theft ?. Lets go through some scenarios to make this clear. Suppose if some one hacked your email id and password and starts to use it , Then you cant do anything with it contact cyber cell. Suppose some one is doing reply attack or some passive attacks on you , then try to reset the password. When evr you are a victim of identity theft make contact with ciber cell.

How could a person possibly protect them selves from identity theft? .Pretty simple and make sure the following facts are done. Try to change password of your account once in a week. In the case of software apps like whatsapp try to check the connect to web option is off. Always keep double security options where it is available. Try not to do anything that you dont know from internet. Take the safety measures as much as possible.

How can we identify we are a victim of hack? There are two types of attack . Passive attack and active attacks. Passive attacks cant modify the data we sent where as active attacks can do anything with our system. There is no way to identify that you are a victim of passive attack but you can always prevent it by using the above mentioned safety measures. Active attacks can be identified by seeing the nature of the message that we recieve,

is online shopping is safe for transaction? it is a matter of howmuch the site is secure. If the site is not protected, Then the chance of being hacked is very high. How to check the site is secured? if the site is having SSL certificate then we are clear for shopping. We can understand SSL certificate by checking that the link contains https not http.

There is an article about identity theft by Odysseas Papadimitriou . He says that Identity theft occurs when someone gains unauthorized access to your personally identifying information. As per his reaserches the most of the identity theft was to steal govt documents and benefits. Cretit card faud and phone sneeking also plays a role. The identity theft complaints are rapidly increasing year by year.
