

1

CHAPTER I

2

3

THE PROBLEM

4

5

Rationale

6 Reading is an integral part of every child's life, as it not only helps in their
7 academic development but also in developing their imagination and creativity.
8 According to research, students who read proficiently at their primary grade level
9 are more likely to succeed in reading and other areas of learning. As a result, both
10 parents and teachers must work together to ensure that children are exposed to
11 literature at a young age. This will help them develop strong reading and
12 comprehension skills that will benefit them in the future.

13 Identifying letters and their corresponding sounds is an important skill for
14 children to develop in the early grades. Alphabet knowledge is the ability to
15 recognize, name, and write letters as well as produce the sounds associated with
16 those letters (Piasta & Wagner, 2013). Perhaps the best predictor of later reading
17 ability is knowledge of letter names and their corresponding sounds
18 (Schattschneider, Fletcher, Francis, Carlson, & Foorman, 2014).

19 Students use letter-sound patterns to pronounce unfamiliar words, which is
20 why letter-sound recognition—also known as "graphemic knowledge"—helps them
21 "decode" written language and learn new words for themselves.

22 A key component of learning how to read is developing phonemic
23 awareness, which is the capacity to examine the sound structure of language
24 (Wagner & Torgesen, 2014). Early phonemic awareness instruction prevents
25 reading failure in many children with or at risk for reading disabilities (Torgesen et

26 al., 2014). According to the National Institute of Child Health and Human
27 Development, effective phonemic awareness instruction is explicit and systematic
28 it requires the instructor to explain and model phonemic awareness skills such as
29 phoneme segmentation, phoneme blending, and phoneme manipulation prior to
30 guiding the child in practicing the skills (Rupley et al., 2016). Educators with strong
31 phonemic awareness skills are able to properly model phonemic awareness skills
32 and to respond appropriately to children's errors (Moats, 2016; Spencer et al.,
33 2018).

34 Based from the result of the Functional Literacy Assessment Tool (FLAT),
35 conducted on September 2022, 8 out of 13 Grade 1 pupils failed to identify the
36 letters of the alphabet. These results show the substantial learning loss in
37 phonemic awareness of first-grade primary school pupils' due closure of schools
38 during the widespread of Covid-19 virus (Coskun & Kara, 2022).

39 With the various challenges shown by the pupils, especially the Grade 1
40 pupils, one of their common difficulties are in the area of alphabetic principles in
41 terms of phonemic awareness and sound recognition. During the duration of our
42 stay for our internship, we noticed that there was difficulty in the alphabetic
43 principles of the pupils, especially the Grade one learners. On the other end, we
44 have observed and proved that this is a problem since we had our Observation
45 and Participation pace of our internship wherein, they have shown difficulties in
46 reading and identifying alphabet sounds based on their performance and quizzes.
47 With this reason, we came up with the title "Improving the Alphabetic Principle of

48 Grade 1 Pupils Through Contextualized Teacher-Made Interactive PowerPoint
49 Presentation”.

50 The dynamic nature of interactive slides allows educators to engage
51 students actively, fostering a more participatory and immersive learning
52 experience. Through interactive elements such as clickable letters, word-building
53 exercises, and phonics activities, learners can develop a hands-on understanding
54 of the alphabetic principle, reinforcing letter-sound associations and word
55 formation. Visual aids, animations, and multimedia elements in interactive
56 PowerPoint presentations can enhance comprehension and retention, catering to
57 diverse learning styles. Additionally, immediate feedback and reinforcement
58 features within the presentation can provide valuable opportunities for self-
59 assessment, promoting a more personalized and effective learning journey for
60 students as they grasp the foundational aspects of reading and language
61 acquisition.

62 **Problem Identification**

63 The problem on the alphabetic principles was identified through class
64 observation and consultation with our teacher training instructor that we seek to
65 improve teacher-made interactive PowerPoint presentation method.

66 This study seeks to determine, if teacher-made interactive PowerPoint
67 presentation in improving the alphabetic principle of Grade 1 pupils of Pasuquin
68 Central Elementary School.

69

70

71 **Theoretical Frameworks**

72 Interactive Teaching

73 Interactive teaching is an approach of instructing wherein the teachers
74 actively involve the pupils in their learning process by way of regular teacher-pupil
75 interaction, pupil-pupil interaction, use of audio-visuals, and hands-on
76 demonstrations. The pupils are constantly encouraged to be active participants.
77 Understanding and meaning are emphasized, as opposed to mere rote
78 memorization. This facilitates an environment fostering long-term memory
79 retention (Saez, Lopez 2011).

80 Applying an interactive approach to teach the alphabetical system in
81 PowerPoint can make a great difference in student's learning. Reading and writing
82 are based on the alphabetic principle which states that written symbols stand for
83 sounds. Interactive teaching facilitates active learning that boosts understanding
84 of the alphabetic principle.

85 Constructivism Theory

86 Constructivist learning is the root of interactive learning. According to
87 constructivism, learning emphasizes the active role of learners in building their own
88 understanding. Rather than passively receiving information, learners reflect on
89 their experiences, create mental representations, and incorporate new knowledge
90 into their schemas. This recommends that pupils engage in participatory and
91 experiential learning in which they engage with their environment (McLeod, Saol
92 2022).

93 Interactive learning methods involving the use of games, quizzes, and
94 simulations can be incorporated in designing PowerPoint presentations to motivate
95 learners' participation. This facilitates exploration and hands on experience with
96 information where links to the alphabetic principle are likely made. Moreover, the
97 inclusion of multimedia components such as sound bites and visuals would also
98 enrich the learners' experience through varied input sources that cater to the
99 various forms of learning.

100 Through structuring PowerPoint presentations within the confines of
101 constructivist principles, educators will create a conducive environment for
102 exploring, cooperating, thinking deeply about what is being taught, among many
103 other things. Such learners could be incited to discuss concepts with peers as well
104 as reflect on their own learning process. The interactive approach promotes the
105 understanding of the alphabetic principle, fosters critical thinking, and enhances
106 comprehension of the issues involved in learning (Fittipaldi, E. 2016).

107 Interactive Learning Theory

108 Interactive learning is a teaching approach that aims to actively engage
109 students in the learning process, often through the use of technology. It involves
110 hands-on, real-world methods of relaying information in classrooms, such as
111 inviting students to participate in the conversation through technology or through
112 role-playing group exercises in class (Staff, 2018). An interactive learning strategy
113 hooks up the attention and participation of the learners.

114 PowerPoint presentations are an attractive venue to provide letters, sound
115 and word building activities. Educators should use elements like clickable buttons

116 or drag-and-drop games, as well as multimedia in their lesson by creating a vibrant
117 learning environment to engage the learners during the learning process. This can
118 be illustrated in for instance one of a slide having audio-pronounced letter
119 accompanied by PowerPoint, followed by activity which student will match one
120 letter with appropriate sound (Hwang and Wu, 2014).

121 Cognitive Approach

122 The cognitive approach to learning is a way of understanding and
123 remembering information based on how the human brain processes information. It
124 emphasizes the role of mental processes in learning, such as attention, memory,
125 and problem-solving. By understanding how the mind works, teachers can design
126 better ways to learn.

127 Cognitive learning theory helps in interpreting how people learn using
128 mental skills like perception, memory, problem-solving etc. According to this
129 theory, cognitive learning strategies should be formulated for improving a
130 phonological principle, or more accurately, the alphabet principle (i.e.,
131 understanding relationship between letters and sounds), engaging learners in a
132 meaningful way (Ertmer, 2016). PowerPoint presentations that adhere to cognitive
133 principals will aid teachers in their attempt to teach the alphabetic principle. For
134 instance, the use of visual aids like pictures of letters with accompanying
135 objects/phonetics is effective in triggering visual recall and linking sounds with
136 letters. Adding interactive features like quizzes or games will make learners
137 participate actively. This will ensure that, one reiterates letter-sound associations.

138 Interactive PowerPoint presentations can be a powerful tool for teaching
139 and learning when used effectively. They can help students grasp complex
140 concepts and remember key points by organizing visually appealing and easy-to-
141 understand information. Additionally, by using PowerPoint slides in conjunction
142 with other instructional materials, such as textbooks and handouts, teachers can
143 ensure that all students are able to access the information being presented in class
144 (Flyslides, 2023). Interactive PowerPoint presentations can be used to increase
145 interactivity and engagement between students and between students and the
146 instructor. Techniques such as adding questions for students to answer, using
147 multimedia such as video and audio, and incorporating interactive elements such
148 as quizzes and games can make the learning experience more dynamic and
149 engaging.

150 **Statement of the Problem**

151 This study aims to improve of Grade 1 pupils through contextualized
152 teacher-made interactive PowerPoint presentations. Specifically, it will seek to
153 answer the following questions:

- 154 1. What are the mean scores obtained by the Grade 1 pupils of Pasuquin
155 Central Elementary School in their:
 - 156 1.1 pre-test?
 - 157 1.2 post-test?
- 158 2. Is there a significant difference between the pre-test mean score and post-
159 test mean score?
- 160 3. Is the contextualized teacher-made PowerPoint approach effective?

161 **Significance of the Study**

162 The study will benefit the following:

163 **Pupils.** This research is beneficial to all the pupils for this will enhance their
164 alphabetic principles through the use of Contextualized Interactive PowerPoint
165 presentations.

166 **Teachers.** The result of the research can be helpful as their guide in
167 enhancing learners' alphabetic principles.

168 **Researchers.** The result of this research can be used as a material that
169 can be used to identify and enhance alphabetical principles of learners

170 **School.** This research will be their guide in improving the curriculum of the
171 school.

172 **Definition of Terms**

173 The following words are commonly used in this study and have operationally
174 and technically defined for a better understanding of the term used in this study.

175 **Alphabetic Principle.** The systematic and predictable relationships
176 between written letters and spoken sounds of the learners.

177 **Contextualized Teacher-Made Interactive PowerPoint Presentation.**
178 The digital material made by a teacher that will be used to get the attention of the
179 learners through interactive and engaging presentation.

180 **Phonological Awareness.** The ability of the learners to work with sounds
181 in spoken language and word reading.

182 **Weighted Pre-Test Mean.** The division of calculated pre-test score by the
183 total number of pupils.

184 **Weighted Post-Test Mean.** The division of calculated post-test score by
185 the total number of pupils.

186 **Mean Difference.** Subtracting the result of the pre-test mean and post-test
187 mean of the pupils to get the difference.

CHAPTER II

208

INNOVATION/ INTERVENTION/ STRATEGY/ IMPLEMENTATION

209

Introduction of the Intervention

210

211

This chapter presents the intervention used to improve the alphabetic principle of the Grade 1 pupils and how the strategies will be implemented.

212

213

214

215

Through observation, visualizations, and early teaching experience showed that pupils should learn about writing, reading and appropriate recognition of alphabets. Their performance and quizzes revealed many mistakes in their alphabetical notions which was shown evident to be in a poor state.

216

217

218

219

Selecting Interactive PowerPoint Presentations as the intervention to improve pupils' alphabetic principles. Creating and conducting Interactive Animated PowerPoint Presentation will be used to improve the pupil's alphabetic principle.

220

221

222

223

224

225

226

We will be using Interactive PowerPoint Presentations for the reason that they are fit and suitable for improving alphabetic principles since the pupils at these times are more interested in animated visual aids than the traditional learning style. Pupils tend to show interests when interactive visuals with interactive activities are involved in to something they will interact to. Learning the alphabets and its sounds through Interactive PowerPoints will help the pupils learn and improve their alphabetic principles better.

227

228

Using Interactive PowerPoint Presentations, they will get an enjoyable atmosphere while learning. They will not feel bored and forced to learn alphabets.

229 This action can help pupils in their alphabetic principles. As a result, their
230 alphabetic writing, reading, and recognizing ability will improve.

231 **Narration of Implementation**

232 The research intervention will be conducted through Interactive PowerPoint
233 Presentations particularly applying the morph transitions and interactive activities.
234 As a part of this research, we will be conducting a pre-test and post-test.

235 As we have noticed that the pupils' difficulty is all about their alphabetic
236 principles, we are able to look for a proper intervention to enhance their alphabetic
237 principles. The researchers are able to formulate an idea of how they can improve
238 the alphabetic principles of pupils by introducing Interactive PowerPoint
239 Presentations in the lesson.

240 On the first day of conducting the research, the researchers will implement
241 the pre-test on every section of the Grade 1 level. The researchers will conduct a
242 quiz about alphabets, which will serve as their Pre-Test (motivation before the
243 lesson) the researcher will give an activity called "Detective Alphabets". The pupils
244 are going to write the first letter that the researcher will show in the slides. It is to
245 measure the level of their alphabetic principles.

246 On the second day, the discussion will be conducted to with the pupils
247 together with the application of the intervention. The researchers will start the
248 teaching pupils regarding the lesson using the best strategy which is using
249 interactive PowerPoint presentations in improving their alphabetic principles. The
250 researchers will start the class by singing the alphabet song to foster their
251 alphabetic principles. Afterwards, the discussion will start to the Introduction of

252 Letters. The pupils will play the “What Letter am I” activity created in the
253 PowerPoint presentation. The objective of the game is to tell the random letter that
254 will be shown by the cartoon character in the game. By using interactive elements
255 inside the PowerPoint presentation, the pupils will acquire focus and enjoyment at
256 the same time.

257 And on the third day, we will discuss the lesson about Concept and Letter
258 Sounds and Its association with Objects. The pupils, later on will engage to the
259 activity inside the PowerPoint presentation “Sound Scavenger Hunt” wherein the
260 researchers will flash a letter in the PowerPoint presentation representing different
261 letter sounds. The pupils will go on a scavenger hunt around the classroom to find
262 items that match each sound. In this activity, we can determine whether the pupils
263 are able to recognize the different sounds in the alphabet.

264 And on the fourth day, the researchers will discuss the lesson about
265 Blending Sounds to Form Simple Words. After the discussion, the pupils will have
266 an activity called “Build Me Up” that will be utilized with the PowerPoint
267 presentation. With this strategy, we can determine if the pupils can connect letters
268 to form simple words.

269 On the last day, the post-test will be answered by the pupils that later on will
270 be compared to their pre-test for comparison. We will evaluate whether the
271 intervention is effective or not and see the progress and improvement of the
272 learners throughout the implementation of the intervention.

273

274

275

CHAPTER III

276

RESEARCH METHODOLOGY

277

278

279

280

281

Research Design

282

283

284

285

286

This chapter shows the methods used as well as the procedure employed in undertaking the study. It includes the research design, sources of data, research instrument, data gathering procedure and statistical treatment.

This study employed the descriptive – evaluative design, using the one-shot Pretest and Posttest method. This was utilized to determine the mean difference between pretest and posttest tests to signify performance in class enrichment using the specified approach for the improvement of the problem indicated in the first chapter.

287

288

289

Where: 01 ----- pretest

290

----- class enrichment

291

02 ----- posttest

292

293

Sources of Data

294

295

296

297

The data were drawn from the results of the pretest and posttest given to the Grade 1 pupils of Pasuquin Central Elementary School, School Year 2023-2024. The class composed of 62 pupils – 31 boys and 31 girls, 50% of the respondents are male similar to 50% of the female population.

298 **Table 1.** Number of Respondents in Grade 1

Grade Level	Boys	%	Girls	%	Total No. of Pupils	%
Grade 1 - Diamond	12	36%	21	63%	33	49%
Grade 1 - Jade	20	62%	12	37%	32	51%
Total	32	51%	33	49%	65	100

299

300 Table 1 shows the number of respondents in Grade 1 learners of Pasuquin Central
301 Elementary School. 32(51%) were boys and 33(49%) were girls respectively. This
302 implies that combined the boys are more than the girls when this study was
303 conducted.

304

305

306

307

308

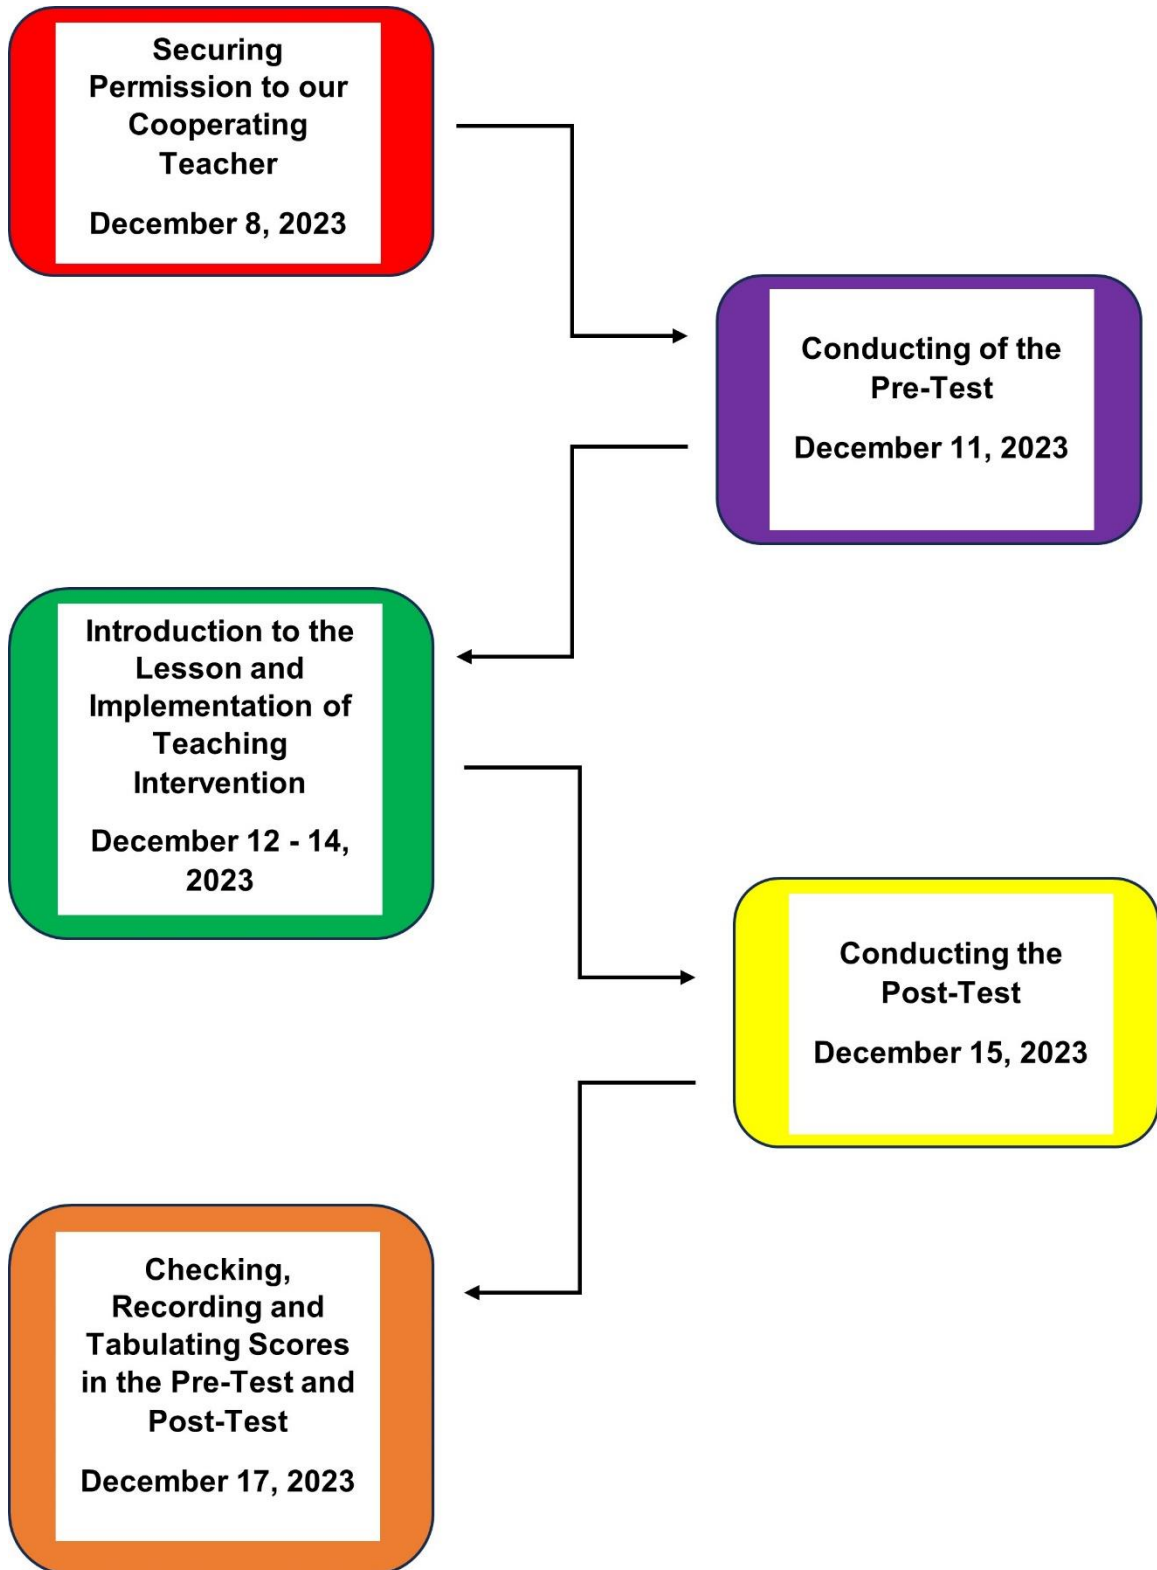

309

310

311

312

313

314

315

Data Gathering Procedure

316 **Securing Permission from the Cooperating Teachers.** Through a
317 request letter, the researchers asked the permissions of their cooperating teachers
318 of Pasuquin Elementary School in conducting their study. The researchers
319 organized the schedules of their activities namely the pre-test, post-test, and 3-day
320 teaching intervention with the Grade 1 advisers.

321 **Administering the Pre-Test.** After the three days of teaching intervention,
322 the researchers gave the learners in the form of worksheets that determined -
323 whether the intervention was effective and to know if the alphabetic principle of the
324 pupils have improved.

325 **Checking, Recording and Tabulating Scores in the Pre-Test and Post-**
326 **Test.** The pupils' test results were thoroughly examined, corrected, and tabulated,
327 and statistically treated.

328

329 **Research Instrument**

330 Pretest and Posttest testing was utilized as a method of this study, the tool
331 used by the researchers in gathering data was a 20-item test, to determine the
332 mean difference between the pretest and posttest testing. The test questions were
333 validated and checked by our research adviser, It is a multiple choice type test
334 composed of 20% of the items were difficult, 60% were average and 20% were
335 easy. The pretest and posttest were administered simultaneously and be checked
336 after the testing.

337

338

339 **Statistical Tools for Data Analysis**

340 The scores of the pupils in the pretest and posttest were carefully and
 341 systematically analyzed, evaluated and interpreted using the weighted mean and
 342 T-test. The weighted mean and t-value were obtained using the following formula:

343 Hypothesis Testing

344 H_0 : There is no significant difference between the pretest mean score
 345 and posttest mean score.

346 H_1 : There is a significant difference between the pretest mean score
 347 and posttest mean score.

348

349 T-test of Uncorrelated Sample. This was used to determine if there is a significant
 350 difference between the pretest and posttest scores of the respondents. The
 351 Computed t-value was compared with critical value 2.045 at 0.05% level of
 352 significance.

Where: t = t value

353

\bar{X}_1 = mean of the pretest.

354 1.

\bar{X}_2 = mean of the pretest.

355

S_1^2 = square of the standard deviation of the pretest.

$$t = \frac{(\bar{X}_1 - \bar{X}_2)}{\sqrt{\frac{S_1^2}{n_1} + \frac{S_2^2}{n_2}}}$$

357

S_2^2 = square of the standard deviation of the pretest.

358

N_1 = number of the cases of the pretest.

359

N_2 = number of the cases of the posttest.

360

Mean = This was employed to determine the mean scores of the respondents in the posttest.

361 2. $\bar{X} = \frac{\sum fx}{n}$

362 Where: \bar{X} = weighted mean

363 $\sum fx$ = summation of frequency

364 n = number of pupils

365 Percentage = this was to determine the percentage of distribution of
366 recipients by sex.

367 3. $\% = \frac{(\sum x) f}{n} \times 100$

368 Where: % = Percentage

369 F ($\sum x$) = frequency

370 N = number of pupils

390	$\sum X1 = 738$	$\sum X2 = 1175$

391 $\bar{x}_1 = 12.3$ $\bar{x}_2 = 18.95$
 392 $Sd_1 = 3.43$ $Sd_2 = 1.06$
 393 Mean Difference: 6.65

394

395 **Table 2.** Shows the total mean scores obtained by the Grade 1 pupils in the pretest
 396 and posttest. It could be noted that there was an increase in the obtained mean in
 397 the pretest 12.3 to the obtained mean in the posttest 18.95. The same findings
 398 indicate further the positive effect of using teacher-made contextualized interactive
 399 PowerPoint presentations in improving the alphabetic principle of the Grade 1
 400 pupils of Pasuquin Central Elementary School.

401

402 **Table 3.** The Analysis Between the Pretest and Posttest Scores of the Grade 1-
 403 Diamond and Grade – Jade pupils

404

T-test of the Difference Between the Pretest and Posttest

	Pretest	Posttest
Sample Size	60	62
Highest Possible Score	20	20
Highest Obtained Score	20	20
Lowest Obtained Score	4	16
Mean	12.30	18.95
Mean Difference	6.65	
T - value	14.56**	

405

406 **Significant at 0.001

Critical t-value = 2.650

407

408 **Table 3.** The computed t-value of 14.56 is greater than the critical t 2.650 at 0.01
409 level of significance at 60 degrees of freedom, two-tailed test. Hence, we reject H_1 ,
410 that there was a significant difference between the pretest and posttest of Grade
411 1 pupils of Pasuquin Central Elementary School therefore, the teacher-made
412 interactive PowerPoint presentation is effective in improving the alphabetic
413 principle of Grade 1 pupils of Pasuquin Central Elementary School.

414 Finally, the interactive PowerPoint Presentation is effective in
415 improving the alphabetic principles in the teaching of English 1 at Pasuquin Central
416 Elementary School.

CHAPTER V

432

FINDINGS, CONCLUSIONS AND RECOMMENDATIONS

433

This chapter presents the summary of the problem, findings, conclusions and recommendations based on the findings of the study.

435

Restatement of the Study

436

1. What are the mean scores obtained by the Grade 1 pupils of Pasuquin

437

Central Elementary School in their:

438

1.1 pre-test?

439

1.2 post-test?

440

2. Is there a significant difference between the pre-test mean score and post-test mean score?

441

442

3. Is the contextualized teacher-made PowerPoint approach effective?

443

444

Summary

445

This study was conducted to improve the alphabetic principle of Grade sixty-two Grade 1 pupils of Pasuquin Central Elementary School.

447

Table 4. Shows Significant Difference of the Pretest and Posttest Results of the Grade 1 pupils.

449

Table 4: Summary of the Significant Difference of the Pretest and Posttest Results.

		Mean	N	df	t value
Pretest		12.3	65	63	14.56**
Posttest		18.95			

Difference		6.65			
------------	--	------	--	--	--

450

451 **Significant at 0.01

Critical Value: 2.650

452

453 General Findings

454 Based on the results of the analysis, the following findings are presented:

- 455 1. The result of the pretest showed that most of the Grade I pupils have
 456 low level in terms of their alphabetic principles compared to the posttest.
- 457 2. The computed value shows a significant difference between the pretest
 458 and posttest after the conducted class enrichments with the use of
 459 interactive PowerPoint presentations. The obtained mean in the pretest
 460 12.3 and the obtained posttest 18.95. The computed t 14.56 is greater
 461 than the critical t 2.650 level of significance at 63 degrees of freedom.
- 462 3. Contextualized Teacher-made Interactive PowerPoint presentation
 463 approach is effective in improving the alphabetic principles of the Grade
 464 1 pupils.

465

466 Conclusions

467 Based on the findings of the study, it is concluded that:

- 468 1. There was a great improvement in using contextualized teacher-made
 469 interactive PowerPoint Presentations.
- 470 2. Contextualized teacher-made interactive PowerPoint is very effective in
 471 improving the health alphabetic principles of the Grade 1 pupils.

472 Recommendations

473 After conducting and succeeding this action research to the Grade 1 –
474 Diamond and Grade 1 – Jade pupils of Pasuquin Central Elementary. From the
475 conclusions above, we would like to offer some recommendations:

- 476 1. The use of contextualized teacher-made PowerPoint presentations is
477 recommended to the teachers as an alternative strategy in improving the
478 alphabetic principles of the pupils.
- 479 2. A teacher is encouraged to prepare different alternatives that they can
480 utilize in order to gain the attention of their pupils in various lessons, a
481 strategy where they can interact, enjoy, and most importantly, to be able to
482 learn at the same time. Introducing the alphabets and its principles by the
483 use of interactive PowerPoint presentations, It will help the teachers to
484 improve the pupils' alphabetic principles.
- 485 3. In utilizing interactive PowerPoints, teachers are also encouraged to use
486 this technique across different subjects.
- 487 4. To future researchers, we encourage them to prepare their planning very
488 well, and develop some dimensions which have been observed deeply.
